

FWDP 1000 – Web Development 1

Assignment #1

Due Date: End of day. Have the instructor look at the files or upload today's folder to the Learning Hub.

Marks: 10 points. See the rubric in the Learning Hub for details.

Notes

To complete the assignment, please use the following:

- The provided content for step 4.
- The résumé PDF file.
- Today's slides and in-class code.

Tasks

1. In your code editor, open the about-us.html file we created in class.
2. Begin by creating the basic structure of an HTML document.
3. In the body element, use the three elements we learned in class to create a semantic structure for the content of the webpage.
4. Within those three elements, add the provided content and wrap them in the appropriate HTML tags. You will need to determine where in the semantic structure this content should appear.

The final page should include the following:

- a. A Heading for the website
- b. A Heading for the webpage
- c. A Section with the following:
 - i. A Heading for the section
 - ii. Two Paragraphs
 1. Create four inline text elements
 2. Look for the square brackets [] in the content to find where to add the elements and hints on which tags to use
 3. [Use this resource](#) and look at the table to find the four HTML tags to use
 4. Delete the square brackets after creating the HTML elements
 - iii. A sub Heading
 - iv. An unordered List with four list items
- d. A Section with the following:
 - i. A Heading for the section
 - ii. A paragraph with a link to a PDF file
 1. Create a subfolder called "media" and download the résumé PDF into it.
 2. [Use this resource](#) and see how to create a link to a "subdirectory"
- e. A Footer with copyright text and an email link
 - i. [Use this resource](#) and see the "Linking to an email address" example
